

# Aircraft Hangars

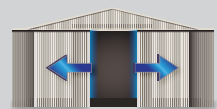

## Spacious and practical

A Tru-Bilt Aircraft Hangar is a specialised shed with wide access openings giving you ample space for your plane and any other equipment you choose to store. The strength that comes with the Rectangular Hollow Section (RHS) frame system allows for the wide openings that are crucial for plane storage. With a wide range of plane sizes and shapes we can manufacture and build a Hangar to suit your exact specifications.

The traditional Tru-Bilt Aircraft Hangar incorporates external sliding doors with outriggers to allow for maximum door width

openings. If building space is limited then the Tru-Bilt Aircraft Hangar can be manufactured with internal sliding doors. The internal sliding door set up eliminates the need for the Hangar to have sliding door outriggers. The space saved by having internal sliding doors on your Hangar allows you to maximise surrounding land.

Your Tru-Bilt Aircraft Hangar is manufactured to last and will provide you with many years of reliable service. Only the best quality materials that require minimal upkeep and maintenance are used.

Sliding doors allowing maximum openings

Tried and tested design
